(I), (II) and (III) are useful cin medicine and in the manufacture of medicaments for treating and perception (CC (I) is useful in diagnostics and in the affinity purification of CC (I) is useful in diagnostics and in the affinity purification of CC circulating apatient susceptible to or suffering from allergies. (IV) is also useful in diagnosing atopy. AAB25907 to AAB26099 represent construction of the present construction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            excipient; (2) preparation of (1), comprising conjugating a peptide to protein D or its fragment; and (3) preparation of a vaccine of (1), comprising formulating (I) with an excipient. (I) has cytostatic, and the vaccine are useful for the manufacture of a medicament for preventing and treating infectious diseases such as malaria or chronic disease such as cancer, Alzheimer's disease or allergy in a patient. Unlike prior art immunogens, (I) induces high levels of antipeptide immune responses while inducing a moderate humoral response against the carrier. The present sequence represents a specifically claimed immunoglobulin E (IgE) epitope immunogenic peptide sequence, which can be used in an immunogen of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 9 AA;
                         The present invention relates to a composition comprising allergy peptides linked by an inert carrier. The allergy peptides are derived from Immunoglobulin E (IgE) or IgE receptor. The present peptide is or such peptide from IgE. The composition is useful as a vaccine or for manufacturing a medicament for the prophylaxis or treatment of allergy In particular, for boosting an anti-allergy immune response in an individual susceptible to an allergic response
                                                                                                                                                                      New vaccine comprising allergy peptides linked by an inert carrier, useful for boosting an anti-allergy immune response in an individual susceptible to an allergic response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Vaccine; immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  IgE peptide #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               21-MAR-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to linkage methodology for use in the conjugation of compounds (e.g. peptides) to carrier vehicles (e.g. macromolecules, polymers, dendrimers, proteins) to produce biological and immunological constructs. The invention provides a method for linking an pharmaceutical composition or a vaccine. The invention describes peptides derived from or mimotopes of the Cepsilon2, Cepsilon3 or Cepsilon4 regions of human immunoglobulin E (IgE) which are used to produce conjugated compounds. The compounds or compositions of the invention are useful in the manufacture of a medicament for the treatment of IgE mediated diseases. The invention allows for controlled conjugation of a macronic of the invention of a mediated diseases. The invention allows for controlled conjugation of a mediated diseases. The invention allows for controlled conjugation of a mediated diseases.
                                                                                                                                                                                                                                                                                                                                                                             peptide epitope (antigen) to a protein so as to form an immunogenic conjugate which may be able to raise a protective antibody response in animal or human patient. AAU16632-AAU16913 represent peptides derived from or mimotopes of the Cepsilon2/Cepsilon3/Cepsilon4 region of human
                                                                                                                                                                                                                                                                                                              Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to conjugates suitable for use in vaccines, where the conjugate comprises a disulphide bridge cyclised peptide and an immunogenic carrier. The vaccines can be used in the treatment of allergies. The present sequence is a peptide immunogen derived from human immunoglobulin B (IgB) suitable to be cyclised and used in the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (HBc) chimeric protein molecules, and maintaining the patient to induce cells activated against HBc. The methods and compositions of the present invention are useful for treating chromic hepatitis B infection. This is the amino acid sequence of a chimeric hepatitis B virus related B-cell epitope useful for expression within the HBV chimer at the N-terminus, epitope useful for expression within the HBV chimer at the N-terminus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a method of producing cytotoxic T lymphocytes CC (CTLs) specific for one or more non-tumour self antigen T cell epitopes. CC The method involves loading antigen presenting cells (APCs) having class CC I major histocompatibility complex molecules with the T cell epitopes. CC and culturing the CD8+ T cells with the APCs to activate precursor CD8+ T CC cells specific for the T cell epitopes. The invention is useful for CC treating autoimmune disease including rheumatoid arthritis, psoriasis, CC lupus, autoimmune epitritis, multiple sclerosis, autoimmune thyroiditis, cc insulin dependent diabetes, Crohn's disease, inflammatory bowel disease, CC graft versus host disease and transplant rejection and/or allergic CC disease such as food allergy, hay fever, allergic rhinitis, allergic The present sequence is human immunoglobulin E (IgE) HLA-A2 peptide CC motif. This peptide is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        surface exposed group/spitope (E1) of C-epsilon-2 domain (D) of C immunoglobulin E (IgE), or its mimotope. Also described are: (1) an CC immunogen (II) for treating allergy comprising (I); (2) a vaccine (III) Cf or treating allergies comprising (II); (3) a ligand (IV) capable of CC (Is) compising E1; (4) a pharmaceutical composition (PC) comprising (IV); (5) a peptide (Ia) capable of being recognised by (IV); (6) an immunogen CC (IIa) comprising (Ia); and (7) producing (III) by producing (III) can CC have antiallergic and immunosuppressive activities, and can be used as a CC constitution and inthe manufacture of medicaments for treating and CC preventing allergies. (IV) is useful for identifying mimotopes of P1, in CC (I) is useful in diagnostics and in the affinity purification of CC circulating anti-IgE antibodies from blood. (I), (III) and PC are useful CC is also useful in diagnosing atopy. AAB25907 to AAB26099 represent CC invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

A linkage comprising an

immunogenic conjugate useful treatment

of.

ΙgΕ

immunogenic carrier. The vaccines can be used in the treatment allergies. The present sequence is a peptide immunogen derived immunoglobulin E (IGE) suitable to be cyclised and used in the

from human

The present invention relates to conjugates suitable for use in vaccines, where the conjugate comprises a disulphide bridge cyclised peptide and an immunogenic carrier. The vaccines can be used in the treatment of

The invention provides a method for linking an epitope (e.g. a peptide) to a carrier (e.g. a protein) for use in a pharmaceutical composition or a vaccine. The invention describes peptides derived from or mimotopes of the (Cepsilon2, Cepsilon3 or Cepsilon4 regions of human immunoglobulin E (IgE) which are used to produce conjugated compounds. The compounds or compositions of the invention are useful in the manufacture of a medicament for the treatment of IgE mediated diseases. The invention allows for controlled conjugation of anothers of antiran in the manufacture of a medicament for the treatment of IgE mediated diseases. The invention allows for controlled conjugation of a mention when the controlled conjugation of the controlled controlled conjugation of the controlled controlled controlled controlled cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (SMIK )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       22-AUG-2000; 2000GB-00020717.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                17-AUG-2001; 2001WO-EP009576
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WO200216409-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              vaccine; antiallergic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                            The invention relates to a method of producing cytotoxic T lymphocytes (CTLs) specific for one or more non-tumour self antigen T cell epitopes. The method involves loading antigen presenting cells (APCS) having class I major histocompatibility complex molecules with the T cell epitopes, and culturing the CD8+ T cells with the APCS to activate precursor CD8+ T cells specific for the T cell epitopes. The invention is useful for treating autoimmune disease including rheumatoid arthritis, psoriasis, lupus, autoimmune enphritis, multiple sclerosis, autoimmune thyroiditis, insulin dependent disease, Crohn's disease, inflammatory bowel disease, graft versus host disease and transplant rejection and/or allergic disease such as food allergy, hay fever, allergic rhinitis, allergic asthma and venom allergy. The invention is also useful in cell therapy. The present sequence is human immunoglobulin E (IgE) HLA-A2 peptide motif. This peptide is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cytotoxic T lymphocyte; CTL; tumour; antigen presenting cell; allergy; lupus; autoimmune disease; rheumatoid arthritis; autoimmune nephritis; psoriasis; APC; multiple sclerosis; autoimmune thyroiditis; hay fever; inflammatory bowel disease; insulin dependent diabetes; cell therapy; Crohn's disease; allergic rhinitis; graft versus host disease; asthma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Producing cytotoxic T lymphocytes for treating e.g. autoimmune diseases, comprises culturing CD8+ T cells with antigen presenting cells to activate precursor CD8+ T cells specific for T the cell epitopes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human immunoglobulin E (IgE) HLA-A2 peptide motif #14.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAE35076;

The luciferase protein is composed of 19 and 35 kDa proteins and is useful as a reporter enzyme. Antibodies against luciferase and oligonucleotides derived from luciferase polynucleotides are useful for identification of novel luciferase or photoproteins from related species. The present sequence is a peptide from 35 kDa subunit of Oplophorus gracilirostris luciferase. (Updated on 07-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Oplophorus gracilirostris luciferase 35 kDa subunit peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAE14481;

                                                          15-MAY-2001;
                                                                                13-MAY-2002; 2002WO-US015341
                                                                                                                                   WO200292773-A2
                                                                                                                                                          Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to compositions comprising a substance the modulates the status of 12595(8 or a molecule that is modulated by 12595(8. The status of a cell that expresses 12595(8 is modulated. The composition is useful for treating cancer, particularly prostate, bladder, kidney, colon, ovary or breast cancer. The 12595(8 protein and/or a nucleotide sequence encoding the protein is useful for immunising a mammal against cancer. The present sequence is a 12595(8 epitope shown in the exemplification of the invention
                                                                                                          21-NOV-2002
                                                                                                                                                                                                                                                                       Human immunoglobulin E
                                                                                                                                                                                                                                                                                                                                              AAE35101 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New composition comprising a substance that modulates the status of 125P5C8 gene or a molecule that is modulated by 125P5C8, useful for treating or preventing cancer that expresses or over expresses 125P5C8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method of producing cytotoxic T lymphocytes (CTLs) specific for one or more non-tumour self antigen T cell epitopes. The method involves loading antigen presenting cells (APCs) having class I major histocompatibility complex molecules with the T cell epitopes. To and culturing the CD8+ T cells with the APCs to activate precursor CD8+ T cells specific for the T cell epitopes. The invention is useful for treating autoimmune disease including rheumatoid arthritis, psoriasis, clupus, autoimmune nephritis, multiple sclerosis, autoimmune thyroiditis, insulin dependent diabetes, Crohn's disease, inflammatory bowel disease, insulin dependent disease and transplant rejection and/or allergic disease such as food allergy, hay fever, allergic rhinitis, allergic classates such as food allergy, hay fever, allergic rhinitis, allergic masthma and venom allergy. The invention is also useful in cell therapy. The present sequence is human immunoglobulin E (IgE) HLA-A2 peptide motif. This peptide is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

The present invention relates to methods and compositions screening, diagnosis or prognosis of Alzheimer's disease

s for (AD)

in

CC subject. The method comprises analysing a sample of brain tissue from a CC subject by 2D electrophoresis to generate a 2D array of Alzheimer's CC disease-associated features (ADFs), whose relative abundance correlates CC with the presence, absence, stage or severity of AD and comparing the CC abundance of each feature with the abundance of that chosen feature in CC Drain tissue from persons free from AD. The invention also describes CC Alzheimer's disease-associated protein isoforms (ADFIS) detectable in CC brain tissue. The methods and compositions of the invention are useful CC for the screening, diagnosis or prognosis of AD in a subject, for ce subject at risk of developing AD, or for monitoring the effect of therapy CC administered to a subject having AD. Antibodies capable of binding to CC ADFIS are useful for treatment regime. An agent that modulates the CC efficacy of a given treatment regime. An agent that modulates the CC cativity of ADFI is useful in the manufacture of a medicament for the treatment or prevention of AD in a subject.
